

Appln. No. 10/657,604

Attorney Docket No. 11138-009

III. Amendments to the Abstract

Please replace the Abstract of the present application with the following amended Abstract.

~~The invention relates to a~~ A receiving part [(2)] of a fluid plug-in coupling is provided, comprising including a socket housing [(10)] having a plug-in opening [(12)] for a plug part [(4)] and having a retaining device [(14)] for releasably fixing the plugged-in plug part [(4)] in place. The retaining device [(14)] has a retaining element ~~(16) which is mounted in the socket housing [(10)] and~~ [(has)] radially elastically deformable retaining sections [(18)] for latching engagement behind a radial retaining step [(6)] of the plug part [(4)], [(and a)], A release element [(20)] which is secured in an axially displaceable manner relative to the socket housing [(10)] via latching means [(22)]. The release element [(20)] engages by means of an inner release section ~~(24) in the plug-in opening [(12)] and, for release purposes,~~ acts against the retaining sections [(18)] of the retaining element [(16)]. ~~In this case, a~~ A securing element [(26)] is provided [(in)] such a manner that the release element [(20)] is blocked in a securing secured position against a release movement and is unblocked in an unlocking unblocked position for a release movement. The securing element [(26)] and the release element [(20)] are preferably rotatable about the coupling axis [(28)] relative to each other between the securing secured position and the unlocking unblocked position.
